

A university plans to develop an Online Examination Registration System that allows students to register for semester examinations, select subjects, pay examination fees, and download hall tickets. Faculty members should be able to verify student eligibility, and the examination office should generate reports and manage schedules. The system should also interact with a payment gateway for online transactions.

- a) Identify with reasons about all the primary and secondary actors involved in the system. (3 Marks)
- b) List the goals of each actor and establish the relationships between the goals and actors. (3 Marks)
- c) Prepare a detailed use case document for the use case “Register for Examination” including Description, Preconditions, Postconditions, Relationships, Basic Flow, Alternate Flows, etc. (6 Marks)
- d) Draw a neat UML Use Case Diagram for the complete system showing actors, use cases, and their relationships. (4 Marks)
